

Silicon Valley Products  
Internet Filtering Solutions

# Block and Track What Your Employees Do Online

The average internet user spends at least 1 hour per day on Facebook, and you can believe that some of this time is spent at work. A lost hour equals lost time to focus on projects. There is a way to keep your employees on track and that is through internet filtering.

With Silicon Valley Products custom internet filtering systems we can block your employees from surfing websites that may hinder work progress including Facebook, Twitter YouTube, and any other sites you may deem as counter productive.

Benefits of our internet filtering plans include:

- Reporting and documentation of website activity for all employees.
- Block employees from social media and video sites like Facebook, Twitter, YouTube, and VIMEO.
- Decreases the risk of virus entry into computers as many viruses enter through social media spam links.
- Free tech support available 7 days a week

**Silicon Valley Products has a wide array of IT experience for multiple industries including insurance and financial services.**
