

## Silicon Valley Products Server Support Solutions

# Let Us Decrease Your Overall Back Up Time

Backing up and maintaining your centralized data can be an intense process, but with the proper server and support put in place back up time can be drastically reduced. A stable server will not only ensure that data is available immediately in the event of a PC crash, but that all system updates are incorporated onto all office computers.

Regardless of the server you are utilizing whether small business or exchange we develop customized solutions for your business. Our Server Support Solutions have reduced client back up time from 12 hours to 5 hours.

Once a server has been setup we will connect to your systems twice a month to make updates. With our support you can gain access to the following benefits:

- Server support includes all workstation maintenance, along with validation of back up success.
- Review of your backup programs and logs to see if there are any errors. Recommendations are then suggested for fast efficient solutions.
- Install latest server and patch updates
- Install latest Microsoft Updates
- Consistent updates of centralized anti-virus control
- Free tech support available 7 days a week
